CEMENT SHOW IN PHOENIX, AZ

J.D. Neuhaus and the IEEE-IAS/PCA would like to extend an invitation for you to join us in the Valley of the Sun, April 9-14, 2006. Timely and pertinent technical papers, five tutorials, five poster sessions, a guided plant tour of the recently modernized Phoenix Cement plant in Clarkdale Arizona, awaits you. J.D. Neuhaus has developed Roller Mill Maintenance units with high lifting capacities up to 200 tons. We carry some weight in the Cement Industry!

PART THREE: J. Diederich Neuhaus

Johann Diederich II (September 25th, 1813 – December 18th, 1883)
 For JDN, the times dictated the direction of the company. Germany was using a new system of united industry to create a footing on the global market. Britain, to this time, had controlled roughly 30% of the export market. The thirst of industry spread to Germany and the USA. Sales to steel works, railroads, chemical and the marine industry all around the globe increased. There was no region in Germany, if not the world, similar to the growth in the Ruhr valley. J. Diederich Neuhaus was able to manufacture winches for the locks at the river Ruhr coal, iron, steel and chemical works. JDN's products were also used for horse driven carriages. The main target of investment for the German government was into the rail systems, to export the finished products to the Balkan region. He also manufactured winches for the railroads which gained importance day by day as wagons had to be lifted, rails aligned and goods moved. There was also a need to increase capacity, a JDN trademark, with 19th century winches lifting up to 20 tons. J. Diederich II was - as far as our records show - was the first winch blacksmith in the family who looked much further forward than his ancestors in that he encouraged his highly talented son Carl to study engineering at the academy in the city of Charlottenburg. His father hoped that Carl one day would "make something" out of the workshop. However as the German saying goes "as man proposes, God disposes". Lieutenant Carl died in the Franco-German war in 1870. But fortunately three sons had learned the art of a winch blacksmith. Carl had fallen, the youngest son died before he became a master. Consequently Louis Neuhaus, would be the son to take over the winch factory of his father.

Wooden Shaft Winch

JDN Updates

- It has arrived, the Profi Lifter 1100 lb. utility winch is here in the US!

- April brings an updated price list, give us a call and we would be happy to send one out to you.
- JDN will appear at the Facilities Expo show at the Anaheim Convention Center, June 7th and 8th. Please stop by if you are in southern California. We would like to have you operate the demo JDN Mini air hoist and see the brand new Profi Lifter 1100 Winch.

JDN WORKS: *Low Headroom*

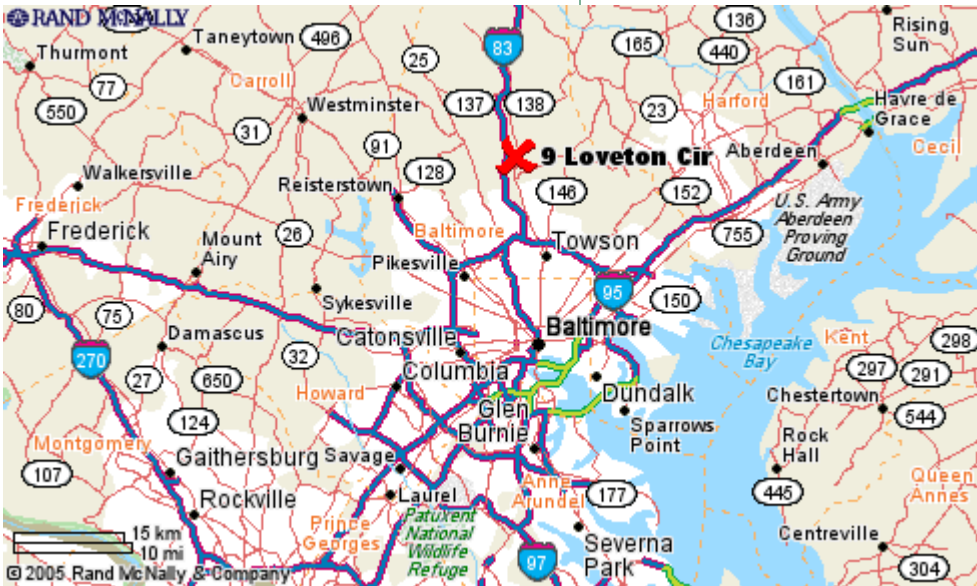

Below are the specifications on our headroom options.

0.5 ton with Trolley
Standard: 20.08 inches
LMF 0.5: 12.01 inches

2 ton with Trolley
Standard: 25.98 inches
LMF 2: 14.76 inches

6 ton with Trolley (Lug Mount)
Standard: 30.04 inches
UH 6: 8.28 inches

12 ton with Trolley (Lug Mount)
Standard: 37.17 inches
UH 12: 10.24 inches

LOCATION, LOCATION, LOCATION!!!

J.D. Neuhaus' corporate office is located just north of Baltimore, Maryland. The headquarters relies on the Port of Baltimore for its deliveries of JDN hoists, winches and crane kits. Also, Maryland is home to Camden Yards, steamed blue crabs, and Edgar Allen Poe's resting place. Visitation to JDN is by appointment only.

ON THE HORIZON

JDN would like to wish a warm and sincere Happy Birthday to Carol White in Accounting! Here at the Newsletter Department we have received several inquiries about giving credit for recent projects that you have completed in the field. We will use your stories, send us an outline or a rough draft, along with a few pictures from the field. We are proud of the equipment we make, and would love to give credit to the industries that we serve. Go to www.jdneuhaus.com for details on example applications of our product.
